SDG 15.4.3

SDG 15 Life on Land

Policy on hazardous waste disposal

Mariano Marcos State University · THE Sustainability Impact Ratings 2027

THE QUESTION

Have a policy, process or practice on waste disposal covering hazardous materials.

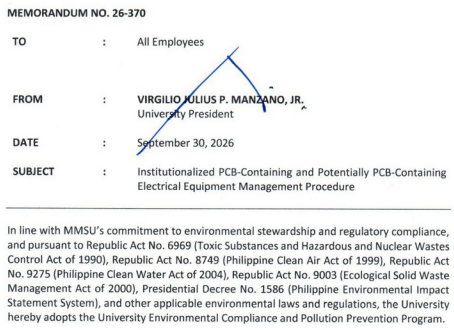

1 Introduction

Yes. The Integrated Pollution and Waste Management Program, revised in 2020 and implemented by the Pollution Control Unit and the General Services directorate, sets out how hazardous materials are handled. It assigns focal persons for hazardous wastes, air and water pollution, solid wastes, and PCBs; unit waste coordinators must store and label hazardous wastes before collection; and units that generate hazardous waste are registered as generators. Wastes are kept in centralised, separate storage, including for PCBs, for up to one year under Republic Act 6969 and its storage guidelines, then disposed of through a DENR-accredited transport, storage and disposal facility in coordination with DENR-EMB. Memorandum No. 26-370 of 30 September 2026 adds an inventory of PCB-containing equipment, written clearance from the Sustainability and Futures Thinking Office before any such equipment is moved or disposed of, and records of manifests and certificates of treatment.

2 Body

2.1 Memorandum No. 26-370 Institutionalizes MMSU's Environmental Compliance and Hazardous Waste Procedures

Ongoing programme · 30 September 2026

MEMORANDUM NO. 26-370

TO : All Employees

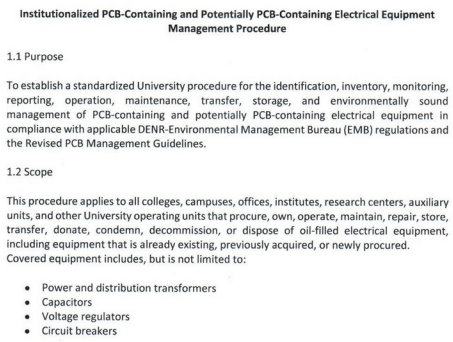

FROM : **VIRGILIO JULIUS P. MANZANO, JR.**
University President

DATE : September 30, 2026

SUBJECT : Institutionalized PCB-Containing and Potentially PCB-Containing Electrical Equipment Management Procedure

In line with MMSU's commitment to environmental stewardship and regulatory compliance, and pursuant to Republic Act No. 6969 (Toxic Substances and Hazardous and Nuclear Wastes Control Act of 1990), Republic Act No. 8749 (Philippine Clean Air Act of 1999), Republic Act No. 9275 (Philippine Clean Water Act of 2004), Republic Act No. 9003 (Ecological Solid Waste Management Act of 2000), Presidential Decree No. 1586 (Philippine Environmental Impact Statement System), and other applicable environmental laws and regulations, the University hereby adopts the University Environmental Compliance and Pollution Prevention Program.

Document: Office of the President Memorandum No. 26-370, 30 September 2026, adopting the University Environmental Compliance and Pollution Prevention Program.

Institutionalized PCB-Containing and Potentially PCB-Containing Electrical Equipment Management Procedure

1.1 Purpose

To establish a standardized University procedure for the identification, inventory, monitoring, reporting, operation, maintenance, transfer, storage, and environmentally sound management of PCB-containing and potentially PCB-containing electrical equipment in compliance with applicable DENR-Environmental Management Bureau (EMB) regulations and the Revised PCB Management Guidelines.

1.2 Scope

This procedure applies to all colleges, campuses, offices, institutes, research centers, auxiliary units, and other University operating units that procure, own, operate, maintain, repair, store, transfer, donate, condemn, decommission, or dispose of oil-filled electrical equipment, including equipment that is already existing, previously acquired, or newly procured.
Covered equipment includes, but is not limited to:

- Power and distribution transformers
- Capacitors
- Voltage regulators
- Circuit breakers

Document: attached procedure for PCB-containing and potentially PCB-containing electrical equipment (purpose, scope and inventory), Memorandum No. 26-370.

Policy	Memorandum No. 26-370, University Environmental Compliance and Pollution Prevention Program
Approved by	University President Virgilio Julius P. Manzano Jr.

Reference no.	26-370
Date	30 September 2026
Provisions	Environmental Compliance Procedures; PCB-containing equipment procedure

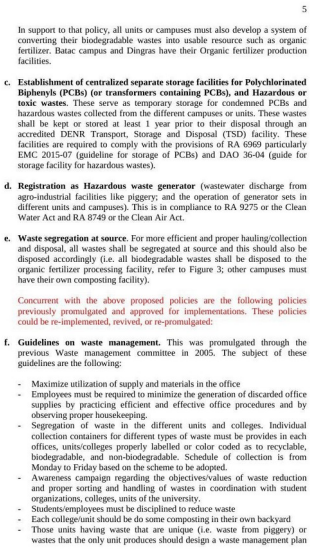

On September 30, 2026, University President Virgilio Julius P. Manzano Jr. issued Memorandum No. 26-370 to all employees, adopting the University Environmental Compliance and Pollution Prevention Program under Republic Act 6969 (Toxic Substances and Hazardous and Nuclear Wastes Control Act), Republic Act 8749 (Clean Air Act), Republic Act 9275 (Clean Water Act), Republic Act 9003 (Ecological Solid Waste Management Act) and Presidential Decree 1586 (Environmental Impact Statement System). The memorandum covers the management of hazardous wastes, wastewater, air emissions, solid wastes and chemicals, together with permits, monitoring, reporting and inspections required by the Department of Environment and Natural Resources – Environmental Management Bureau (DENR-EMB), and directs all offices, colleges, laboratories, research units and auxiliary enterprises to comply with the attached Environmental Compliance Procedures.

The attached procedure for PCB-containing and potentially PCB-containing electrical equipment, such as transformers, capacitors, voltage regulators, circuit breakers, reclosers and oil-filled switches, requires every unit to inventory its equipment and submit the inventory to the Sustainability and Futures Thinking (SFT) Office. The SFT Office validates the inventory, keeps the university's central PCB inventory and the DENR-EMB online PCB inventory, ensures labelling, conducts inspections and annual inventory validation, and prepares the reports required by DENR-EMB. No covered equipment may be relocated, transferred, repaired through oil handling, decommissioned, condemned or disposed of without the SFT Office's written clearance, and PCB wastes and equipment may be disposed of only through DENR-accredited transporters, treaters and disposal facilities. The SFT Office keeps hazardous waste manifests and certificates of treatment or disposal among its records.

2.2 Hazardous Waste Disposal under MMSU's Integrated Pollution and Waste Management Program

Policy · Integrated Pollution and Waste Management Program (revised 2020)

5

In support to that policy, all units or campuses must also develop a system of converting their biodegradable wastes into usable resource such as organic fertilizer. Batac campus and Dingras have their Organic fertilizer production facilities.

c. **Establishment of centralized separate storage facilities for Polychlorinated Biphenyls (PCBs) (or transformers containing PCBs), and Hazardous or toxic wastes**. These serve as temporary storage for condemned PCBs and hazardous wastes collected from the different campuses or units. These wastes shall be kept or stored at least 1 year prior to their disposal through an accredited DENR Transport, Storage and Disposal (TSD) facility. These facilities are required to comply with the provisions of RA 6969 particularly EMC 2015-07 (guideline for storage of PCBs) and DAO 36-04 (guide for storage facility for hazardous wastes).

d. **Registration as Hazardous waste generator** (wastewater discharge from agro-industrial facilities like piggery; and the operation of generator sets in different units and campuses). This is in compliance to RA 9275 or the Clean Water Act and RA 8749 or the Clean Air Act.

e. **Waste segregation at source**. For more efficient and proper hauling/collection and disposal, all wastes shall be segregated at source and this should also be disposed accordingly (i.e. all biodegradable wastes shall be disposed to the organic fertilizer processing facility, refer to Figure 3; other campuses must have their own composting facility).

Concurrent with the above proposed policies are the following policies previously promulgated and approved for implementations. These policies could be re-implemented, revived, or re-promulgated:

f. **Guidelines on waste management.** This was promulgated through the previous Waste management committee in 2005. The subject of these guidelines are the following:

- Maximize utilization of supply and materials in the office
- Employees must be required to minimize the generation of discarded office supplies by practicing efficient and effective office procedures and by observing proper housekeeping.
- Segregation of waste in the different units and colleges. Individual collection containers for different types of waste must be provides in each offices, units/colleges properly labelled or color coded as to recyclable, biodegradable, and non-biodegradable. Schedule of collection is from Monday to Friday based on the scheme to be adopted.
- Awareness campaign regarding the objectives/values of waste reduction and proper sorting and handling of wastes in coordination with student organizations, colleges, units of the university.
- Students/employees must be disciplined to reduce waste
- Each college/unit should be do some composting in their own backyard
- Those units having waste that are unique (i.e. waste from piggery) or wastes that the only unit produces should design a waste management plan

Document: Revised Integrated Pollution and Waste Management Program of MMSU, provisions on PCB and hazardous waste storage and registration.

Policy	Integrated Pollution and Waste Management Program (IPWMP)
Date	2020.
Provisions	Hazardous waste provisions: focal persons, labelling, central storage, DENR-accredited disposal (RA 6969)

MMSU's Integrated Waste Management Program was revised in 2020 into the Integrated Pollution and Waste Management Program (IPWMP), implemented by the Pollution Control Unit and the General Services directorate, to cover hazardous materials. The IPWMP assigns focal persons for hazardous wastes (chemical and related wastes), air and water pollution, solid wastes, and PCBs and related industrial wastes, and requires the waste coordinators of every unit to store and label generated hazardous wastes properly before collection.

The program establishes centralized, separate storage facilities for polychlorinated biphenyls (PCBs) and other hazardous or toxic wastes collected from the campuses, where the wastes are kept for up to one year before disposal through a DENR-accredited transport, storage and disposal facility, in compliance with Republic Act 6969 and its storage guidelines. Units that generate hazardous waste are registered as hazardous waste generators, and the university coordinates with the Environmental Management Bureau of DENR for final collection and disposal.

RESOURCES **2, 3**

3 Conclusion

> Registered generators, labelled and centrally stored wastes, DENR-accredited disposal and a PCB inventory with written clearance give hazardous materials a traceable path.
