MMSU's Commitment

Take an active role in protecting and promoting sustainable use of terrestrial ecosystems, responsible land use, and biodiversity conservation.

SDG 15.4.3 · Policy on hazardous waste disposal

Have a policy, process or practice on waste disposal covering hazardous materials.

Evidence year: 2025 (calendar year), with continuing implementation 2024–2026

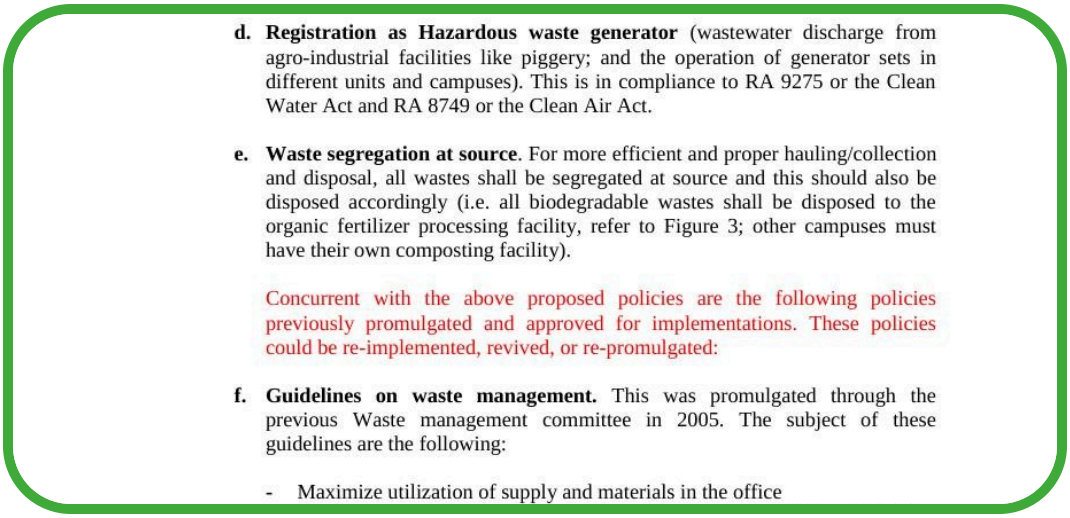

No 2025 item was found for this indicator. The material below predates 2025 and, as far as the public record shows, is still in place.

Continuing implementation

Policies and programmes that began before 2025 and continue to be implemented, with 2024 and 2026 activities that show the programme is ongoing. THE accepts policies that are already in place.

Hazardous Waste Disposal under MMSU's Integrated Pollution and Waste Management Program

Policy · Integrated Pollution and Waste Management Program (revised 2020)

d. **Registration as Hazardous waste generator** (wastewater discharge from agro-industrial facilities like piggery; and the operation of generator sets in different units and campuses). This is in compliance to RA 9275 or the Clean Water Act and RA 8749 or the Clean Air Act.

e. **Waste segregation at source**. For more efficient and proper hauling/collection and disposal, all wastes shall be segregated at source and this should also be disposed accordingly (i.e. all biodegradable wastes shall be disposed to the organic fertilizer processing facility, refer to Figure 3; other campuses must have their own composting facility).

Concurrent with the above proposed policies are the following policies previously promulgated and approved for implementations. These policies could be re-implemented, revived, or re-promulgated:

f. **Guidelines on waste management.** This was promulgated through the previous Waste management committee in 2005. The subject of these guidelines are the following:

- Maximize utilization of supply and materials in the office

Document: Revised Integrated Pollution and Waste Management Program of MMSU, provisions on PCB and hazardous waste storage and registration.

MMSU's Integrated Waste Management Program was revised in 2020 into the Integrated Pollution and Waste Management Program (IPWMP), implemented by the Pollution Control Unit and the General Services directorate, to cover hazardous materials. The IPWMP assigns focal persons for

hazardous wastes (chemical and related wastes), air and water pollution, solid wastes, and PCBs and related industrial wastes, and requires the waste coordinators of every unit to store and label generated hazardous wastes properly before collection.

The program establishes centralized, separate storage facilities for polychlorinated biphenyls (PCBs) and other hazardous or toxic wastes collected from the campuses, where the wastes are kept for up to one year before disposal through a DENR-accredited transport, storage and disposal facility, in compliance with Republic Act 6969 and its storage guidelines. Units that generate hazardous waste are registered as hazardous waste generators, and the university coordinates with the Environmental Management Bureau of DENR for final collection and disposal.
