MMSU's Commitment

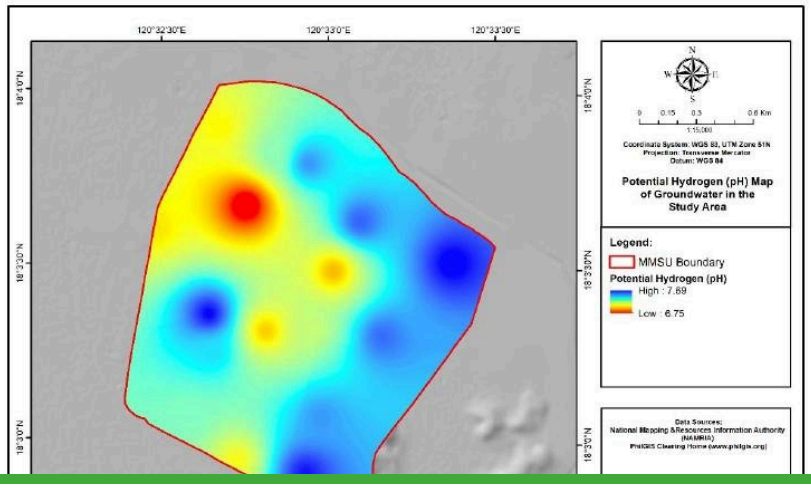

Take an active role in protecting and promoting sustainable use of terrestrial ecosystems, responsible land use, and biodiversity conservation.

SDG 15.4.1 · Water discharge guidelines and standards

Have water quality standards and guidelines for water discharges (to uphold water quality in order to protect ecosystems, wildlife, and human health and welfare).

Evidence year: 2025 (calendar year)

Groundwater Quality Monitoring at the MMSU Farm

Document: Groundwater Quality Assessment of the MMSU Farm, spatial variation of pH (monitoring through June 2025).

Through June 2025, MMSU continued monthly monitoring of 17 groundwater wells on the MMSU Farm, measuring pH, total dissolved solids, electrical conductivity, chloride and nitrate-nitrogen and comparing the results with the Philippine National Standards for Drinking Water (2017). The assessment, covering February 2024 to June 2025, flags wells with persistently high dissolved solids, which rose again from January to May 2025, for continued monitoring to guide water resource management and prevent further degradation of groundwater quality.
