SDG 15.3.4

SDG 15 Life on Land

Alien species impact reduction

Mariano Marcos State University · THE Sustainability Impact Ratings 2027

THE QUESTION

Have a policy to reduce the impact of alien species on campus.

1 Introduction

In MMSU, no policy on alien species is recorded yet. Nothing was found in MMSU's public sources, the focal person's mailbox or the links supplied by the team. A memorandum from the Office of the President requiring native species in campus planting and the control of invasive species would answer the question. The practice it would formalise is already visible. CAFSD graduating classes plant native guijo, yakal, banaba and bamboo in the forest reserves; the Pasuquin mangrove planting uses the native lapis-lapis and arinaya; and 28 native tree species and two bamboo species have been planted at the Biodiversity Conservation Learning Center and Leisure Park. Community foodscapes grow indigenous food plants. What is missing is the written policy, with a responsible office, that states the rule and how invasive species will be controlled.

2 Body

No items yet.

3 Conclusion

A memorandum from the Office of the President requiring native species in campus planting and the control of invasive species would answer it. The native planting already under way in the forest reserves, the mangroves and the Learning Center would then sit under a written policy.
